## JVC upgrades analogue CCTV cameras with improved image processing

**India, Mumbai** (7th JAN 2011) – JVC Professional Products, introduces has upgraded its latest high-resolution, 1/3-inch CCD analogue surveillance cameras. The new versions of the box-style **TK-C9200E** and **TK-C9300E** cameras feature improved image processing to deliver brighter, clearer and more stable images under varying conditions.

The image processing enhancements provide a number of performance upgrades. **Improved edge enhancement**, for example, makes highlighted objects more easily recognisable. **Auto tracking white balance** is now more stable and not easily influenced by colour objects in the scene. The adjustable brightness range has also been widened, and objects illuminated by mercury-vapour light sources now look more natural with improved colour reproduction. Plus, in the LCD mode, images look crisper and the internal setting for brightness is improved, which helps **deliver a brighter image** in various scenes.

Despite the increased market share of networked video surveillance, analogue cameras still account for the lion's share of deployed CCTV systems. As a result, producing innovative analogue cameras continues to be a priority at JVC, and they have been refined to provide even better performance in the field.

The models deliver **600 TV lines** of resolution and feature **a 14-bit digital signal processor** for high quality images. Super LoLux sensitivity assures precise colour reproduction even in challenging lighting conditions. Each camera delivers an industry-leading **52db signal-to-noise ratio**, and **3D noise reduction** reduces picture noise in dark environments. Plus, the eco-friendly cameras use about 40 percent less power than conventional models.

The **TK-C2201E** and **TK-C2201WPE** fixed dome cameras feature a variable focus lens with a patent pending fine focus adjustment (in addition to normal focus ring and lock screw). The TK-C2201E meets the **vandal-resistant standard**, while the TK-C2201E features an **outdoor-ready, IP66** compliant vandal and tamper proof design.

Intuitive menus make detailed settings easy to manage on the **TK-C9200E** and **TK-C9300E** cameras. A true day/night camera, the TK-C9300E **adds ExDR Plus**, a proprietary JVC technology for extended dynamic range that clearly displays people and objects in the foreground even when they are in front of an extremely bright background.

## **ABOUT MHATRE ELECTRONICS PVT.LTD.COMPANY**

Mhatre Electronics Pvt.Ltd, Company, located in Mumbai, is JVC,s partner in India and a leading supplier to the video security industry with a complete line of IP network and analog security cameras, network video recorders, monitors and accessories. For more information about this, or any other JVC Professional Products ,contact MEPL at (+91-22) 28899799 (+91-22)28899480;Jayant Padhye (M)+91-93224239254 , Kuldeep Singh (M)-+91-9322427924 E-mail : admin@meplgroup.com
